LUBAT – 80

DIESEL LUBRICITY ENHANCER ADDITIVE

LUBAT-80 is diesel oil additives specially designed for improving the lubricity properties of diesel oils and following advantages

- Improves the lubricity properties of the diesel fuel.
- Reduces the wear of the injection pumps even with low sulfur content diesel fuels.
- Improves engine durability and reduces maintenance costs.

Other diesel oil properties (cold flow properties, colour, emulsification) are not affected by this additive and LUBAT-80 does not interfere with other additives or dyes usually used in diesel oil treatment

LUBAT-80 is specially recommended for the treatment of diesel oils with low sulfur content.

LUBAT-80 may be stored and handled at a temperature from 10 deg C to 50 deg C, Carbon steel, stainless steel, polyethylene, or Teflon may be used in the construction of storage capacities and injection systems. The use of rubber (either natural or synthetic) and polystyrene is to be avoided.

The recommended methods of blending are on-line injection into the flow of diesel fuel or injection into the recirculation lines of the storage tanks.
